

Input

.csv

```
dat ← read.csv("path.csv")
```

.xlsx

```
dat ← openxlsx::read.xlsx("path.xlsx")
```

.rds

```
dat ← readRDS("path.rds")
```

.RData

```
load("path.RData")
```

Output

single R object

```
saveRDS(object, "path.rds")
```

multiple R objects

```
save(object1, object2, ..., file = "path.RData")
```

workspace

```
save.image("path.RData")
```
